

Why Insight for Microsoft Azure services?

Insight is Microsoft's largest global Licensing Solution Provider (LSP) and has been providing Microsoft® solutions for more than 25 years. As one of the first Microsoft LSPs and enterprise software advisors, we put Microsoft at the center of our end-to-end strategy to help businesses run smarter. We collaborate to deliver intelligent technology solutions that meet your strategic business needs and optimize your technology investments.

- Microsoft's largest Azure™ partner
- Microsoft Azure Circle Partner
- Dedicated team of Azure technical solution advisors
- Microsoft's 2014 Transformational Partner of the Year

How Microsoft Azure will help your business

Microsoft's cloud computing platform — complete with analytics, computing, database, mobile, networking, storage and Web services — enables your organization to:

Build infrastructure.

Provision Windows® and Linux® Virtual Machines (VMs) and applications in minutes. Use the same VMs and management tools in Azure that you use on premises.

Develop modern applications.

Build and deploy apps for Android™, iOS® and Windows that take full advantage of the cloud — including Web, mobile, media and line-of-business solutions.

Gain insights from data.

Azure provides managed SQL and NoSQL data services and built-in support. Leverage SQL Server® in the cloud and use HDInsight® to build Hadoop® clusters to analyze data.

Manage identity and access.

Oversee user accounts, synchronize with on-premise directories and get single sign-on across Azure, Office 365 and other software-as-a-service applications, including Salesforce®, DocuSign®, Google Apps™, Box®, Dropbox® and more.

Insight is your expert connection to the Microsoft products that make your business run smarter.

Insight's Microsoft Azure services

Service	Description
API Management	Publish APIs to developers, partners and employees securely and at scale.
App Service	Create enterprise-ready Web and mobile apps for any platform or device, deployed in the cloud.
Automation	Automate the creation, deployment, monitoring and maintenance of resources in Azure using a scalable workflow execution engine.
Azure Active Directory®	Synchronize your on-premise identities and enable single sign-on to simplify user access to cloud applications.
Backup	Manage cloud backups through familiar tools in Windows Server® 2012, Windows Server 2012 Essentials or System Center 2012 Data Protection Manager.
Batch	Scale out parallel workloads, manage execution of tasks in a queue, and cloud-enable apps to offload compute jobs in the cloud.
BizTalk Services	Provides B2B and Enterprise Application Integration (EAI) capabilities for delivering cloud and hybrid integration solutions.
Cloud Services	Quickly build, deploy and manage modern applications.
Content Delivery Network (CDN)	Deliver high-bandwidth content to end users around the world, with low latency and high availability via a global data center network.
Data Factory	Easily create, orchestrate and schedule high-available, fault-tolerant workflows of data movement and transformation activities.
DocumentDB	Offers query and transactions over schema-free data, predictable and reliable performance, and rapid development.
Domain Name Server (DNS)	Host your DNS domains alongside your Azure apps — and manage your DNS records using your existing Azure subscription.
Event Hubs	Enable elastic-scale telemetry and event ingestion with durable buffering and sub-second, end-to-end latency for devices and events.
ExpressRoute®	Create private connections between Azure data centers and infrastructure on premises or in a colocation environment.
HDInsight®	Gain full value of big data with a cloud-based data platform that manages data of any type and size.
Key Vault	Protect cryptographic keys and small secrets like passwords with keys stored in Hardware Security Modules (HSMs). Import or generate your keys in certified HSMs.
Load Balancer	Achieve greater reliability and seamlessly add more capacity to your applications.
Machine Learning	Easily design, test, operationalize and manage predictive analytics solutions in the cloud.
Managed Cache	Build highly scalable and responsive applications by providing super-fast access to data.
Media Services	Offers cloud-based media solutions from existing technologies: ingest, encoding, format conversion, content protection, and on-demand and live streaming capabilities.
Visual Studio® Application Insights	Detect issues, solve problems and improve Web apps through real-time, 360-degree views.

Deployment Services

Insight makes your deployment as seamless as possible with our complimentary Deployment Services. We'll provide you with architectural design to plan and implement your new Azure infrastructure:

- Migration of existing workloads into Azure
- Creation of new server instances within Azure
- Establishment of network connectivity requirements
