Office 365 Platform Assessment

Configure and Implement your Office 365 platform with confidence

Business Challenge

Our experiences show that many organisations stop after they initially moved their data and services into Office 365. They are unsure what are the next steps to obtain the most value and ensure the security and integrity of their data.

To achieve this, policies and processes must be developed and enforced with existing business practices modified to accommodate. Although most organisations have clearly defined policies for existing IT systems, many struggle to adapt them to the cloud service model.

Whether your organisation is just starting its Office 365 journey, has been running for a while or is about to leverage a new feature, Insight's Office 365 Platform Assessment can be used as a blueprint for provisioning services into Office 365 to ensure security and increased productivity.

The Engagement

With our Office 365 Platform Assessment, we will conduct workshops with your key business stakeholders to carry out the assessment of your IT landscape and current cloud presence, identify gaps, and understand the maturity of your organisation. We will review your Office 365 platform using our Office 365 Technical Implementation Framework (TIF), which has been developed specially to provide pragmatic guidance for implementation and configuration of the Office 365 platform and supporting features. This is structured around the following 5 core pillars

Benefits of offering

- Improve your security posture and increase user productivity within Office 365
- Clear assessment of your Office 365 readiness
- Pragmatic guidance for implementing and configuring Office 365

Microsoft

Platform	Security	Governance	Enablement	Adoption
Covers the configuration and enablement of the core platform services	Identity and access management as well as data security and encryption	Operational governance controls for configuration management and service availability	Design governance to meet business demands and maximise return on investment	Business engagement and end user education to increase productivity and capability

Each pillar is managed by a 3-step maturity model with defined measures of progression:

1) Foundation
2) Standard
3) Advanced with defined measures of progression.

The maturity model allows clear assessment of your Office 365 readiness, establishing a base level of requirements and provides recommendations to obtain maximum value and capabilities from Office 365.

At the end of the assessment, we will incorporate your organisational requirements and provide the findings and recommendations in a report as the guidance for managing Office 365 and the security capabilities to improve your companies security posture whilst improving the productivity of your users.
