

# IT Asset Management Maturity Assessment

## Re-chart your path to IT Asset Management Maturity

IT Asset Management (ITAM) is a business process designed to control software spend and reduce the impact of software licence compliance audits. ITAM has been around for quite some time - many well-established businesses started ITAM over twenty years ago and even more businesses have since, particularly with the rise of Software Licence Compliance audits.

As with many business processes, they change, evolve and adapt over time. Some organisations have adopted ITAM and developed its maturity whilst others have allowed it to stagnate or even disappear altogether. What doesn't change is the complexity of managing increased software and subscription costs. The better the governance around managing them, the more agile the business can be, which supports granular visibility of technology costs and what's driving them.

So how does your business compare? Insight's ITAM framework provides the basis for assessing your ITAM maturity, and our light touch maturity assessment is a great starting point. During this engagement, our ITAM specialists will provide you with an assessment around your end-to-end software lifecycle, taking your business processes and governance into consideration.

Insight will deliver a high-level maturity assessment that provides a snapshot of your current state. We focus on key software lifecycle processes including:

- Demand Management and Forecasting
- Technology portfolio management
- Requirement and Procurement
- Receipt, installation and maintain
- Management and reporting
- Optimisation

We will also review the underlying governance that enables a sustainable solution for ongoing management.

Insight's ITAM Assessment comprises of a short number of questions designed to build a view of process maturity across your software lifecycle, and provides you with a high level maturity and recommendations report. This will give you the advice required to help accelerate your journey of IT Asset Management maturity.

Current State Assessment

Maturity and Recommendations report

Best practice IT Asset Management Governance

### Benefits

- Exposing risks associated with software costs
- Discovering trends in software procurement
- Highlighting opportunities to optimise your software lifecycle strategy
