

# Optimising Azure: Streamline Your Spend and Maximise Value

Gain perspective with a snapshot of your Azure

#### **Key Information**

Optimise resources and prioritise cloud tasks with a readonly snapshot of your Azure environment

Receive a summary optimisation report covering costs, usage and more

Plan your next steps with actionable insights and recommendations

## The Azure Health Check is a discreet optimisation analysis of the Azure environment, surfacing opportunities to optimise costs, resources and cloud functionality.

Powered by Surveil's powerful analytical capabilities, the Azure Health Check provides a summarised snapshot of potential savings opportunities – totalling an average of 17-37% - across a number of technical categories.

The Health Check requires read-only access and is a secure means of uprooting hidden opportunities to right-size, optimise and enhance Azure resource usage.

To maximise the value on offer, the Azure Health Check report contains both summary and deep-reaching insights – starting with a brief overview of findings and recommendations.

The report then dives below the surface to explore the cost, usage, wastage and optimisation opportunities across highly relevant areas of Azure – including VM and storage optimisation, Kubernetes, hybrid benefits and Azure tagging.

Want to get a better view of your Microsoft Azure environment? Email **marketing.APAC@insight.com** to book your Azure Health Check today.

# M365 Health Check

## See your Microsoft 365 world in a new light

### Key Information

Easy onboarding with shortterm, read-only access

Identify potential cost savings and productivity improvements

Full, custom report provided following the Health Check period

## The M365 Health Check is the first step to optimising, securing and controlling your Microsoft investment.

Powered by Surveil's powerful analytical capabilities, the M365 Health Check is a discreet optimisation analysis of the Microsoft 365 environment, surfacing opportunities to optimise costs, resources and Microsoft functionality. The end result is a summarised snapshot of potential savings opportunities – totaling an average of 17-37% - across a number of technical categories.

The M365 Health Check requires read-only access and is a secure means of uprooting hidden opportunities to rightsize, optimise and enhance M365 resource usage.

To maximise the value on offer, the M365 Health Check report contains both summary and deep-reaching insights – starting with a brief overview of findings and recommendations.

The report then dives below the surface to explore the cost, usage, wastage and optimisation opportunities across highly relevant areas of M365 – including JML processes, finance optimisation, adoption and consumption of features, AD account distribution and much more.

Want to get a better view of your Microsoft 365 environment? Email **marketing.APAC@insight.com** to book your M365 Health Check today.
