Azure Best Practice Review

Gain confidence in your cloud platform with best practice security and optimisation of your Azure environment

Business challenge

As your business evolves, so does the way that your cloud IT infrastructure is utilised. Whilst the expansion of your Azure environment is largely organic and aligned with developing business needs, the pace at which a business moves invariably means that cost control, operational governance and security is often difficult to manage, leaving the enterprise open to vulnerabilities.

It is critical to develop appropriate 'platform guardrails' or best practice governance that optimises cost control and security whilst enabling consumer autonomy across your Azure environment.

How we help

Leveraging Microsoft best-practice toolsets, our team of Azure specialists will guide you through a one-week engagement to provide a detailed analysis of your Azure environment against best practices and identify opportunities for improving security, governance and cost management.

During this engagement we will collate the information and findings of your current challenges and work with you to discuss opportunities for optimisation in an interactive follow-up Q&A session.

CURRENT STATE ANALYSIS → **RECOMMENDATIONS**

Governance, cost and security best practices

Diagram: Insight's 2-phase Azure best practice review approach

Duration

- 2 weeks

Benefits

- Understand if your Azure environment aligns with Microsoft best practices
- Gain visibility in improvement opportunities to save on cost and improve the overall security posture

Insight awards

- 2021 Worldwide Partner of the Year in Solution Assessments and Azure Migration
- Microsoft Solutions Partner for all Solution Areas
