

Cloud Care Spend Optimisation

Govern and contain your Multi-Cloud spend

Did you know?

In 2020, Insight has uncovered customers wasting up to 40% of their cloud budget due to ineffective cloud governance.

This means that if you have invested in cloud, there may be opportunities for you to leverage improved governance to both realise savings and increase security to deliver an impact that matters to your business.

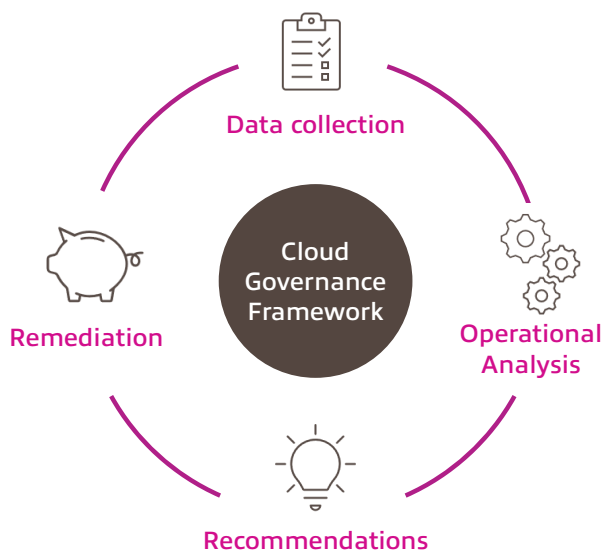

Business Challenge

It's not unusual to sustain regular monthly cloud overages or to find out that you've subscribed to far more licences than you need. The challenge is that by the time you reach this point, you are already wasting money. Keeping track of consumption across multiple cloud platforms is challenging as it's hard to manage and standardise reporting in one place.

Cloud and Infrastructure engineers already have a job and to them it's often not cost optimisation. Many will only be responsible for managing one of many applications hosted within your cloud platforms. Multiple management approaches across different application teams leads to inconsistency in approach, creating cost and security risks. Without a higher level of governance across your entire cloud estate, costs will continue to escalate.

Benefits of offering

- Contain future cloud cost with a multi-cloud cost management solution: AWS, Azure and GCP in one platform
- Eliminate worry through instant alerts that helps monitor, reduce risk and prevent changes from becoming expensive
- More detailed cost optimisation reporting than the native toolsets
- Expert remediation advice on-hand

Multi-Cloud Governance

Insight's customer investigations show that every customer has services which can be turned off, modernised or optimised. It's easy to turn on services that can cost thousands of dollars per day but left unchecked simple governance mistakes can cost a company tens of thousands of dollars in a matter of days.

Multi-Cloud Governance is a challenge requiring the right technology and know-how. It needs dedication and routine to be effective and when married with the right technology it delivers savings and increases control without impacting the development experience. Insight brings multi-disciplinary and cross sector expertise to amplify your cloud governance, leaving your team to focus on driving more strategic business imperatives.

How we can help

Insight's Cloud Care Spend Optimisation service harnesses a best-in-class cloud analytics technology and 30+ years of combined team expertise to deliver peace of mind in day-to-day multi-cloud operations management.

Our service provides a layer of governance across your major cloud platforms, designed to reduce the cost and risk of cloud adoption for your organisation. It will enable your engineering teams to focus on developing solutions to enhance employee and customer experience while we assist you in validating that best practices and cost optimisation measures are implemented.

We save you money by preventing wastage and create a platform to allow your development teams to architect systems in a cost optimised way without sacrificing velocity and security.

Service Description

We deliver a pathway to lasting Cloud Savings with focus on spend, security and remediation. Our service tells you where and how you can save costs by performing changes to your cloud platform and leveraging the latest in commercial offers from your cloud partners. Our team of professional services consultants can support you to implement changes which will amplify the value of your investments across the major cloud platforms.
