

3 ways to move from 'hybrid by default' to 'hybrid by design'

Hybrid work is here to stay, with employees demanding more flexibility around where and when they work. Every business needs to make the switch from a quick fix for remote work to a long-term hybrid work strategy.

Hybrid work is here to stay

73% of workers want **flexible, remote work options** to continue¹

Yet the current model is broken.

People crave connections

67%

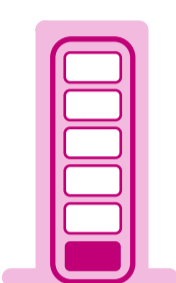

of workers want **more in-person time** with their teams¹

Employees are exhausted

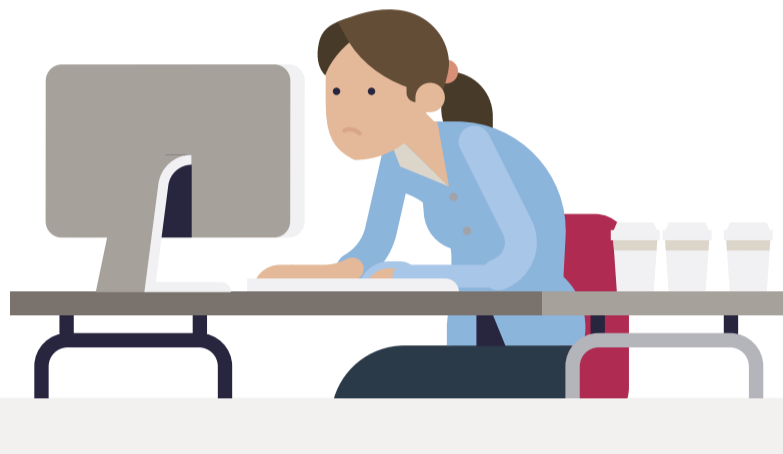

148%

increase in weekly meeting times¹

45%

increase in digital chats¹

Designing your secure, connected workplace

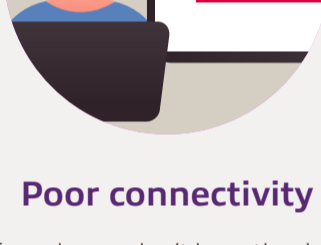

Here are three tips to help you plan your hybrid IT environment and create an even playing field for all employees, regardless of where they work. Learn how you can proactively monitor and manage employee wellbeing, too.

Hybrid by default

Hybrid by design

From here

To here

Poor connectivity

If employees don't have the right tools for remote work, they can't connect and collaborate with peers, or access files from home.

Not only does it affect work quality, but it leads to employee frustration and stress.

Seamless collaboration

With most employees already familiar with Microsoft Office tools like Word, PowerPoint and Excel, extend your investment to SharePoint and Teams to support all workers, everywhere, and boost wellbeing.

Complexity

If you have multiple communication and collaboration platforms in play, IT cannot gain a clear view of users, devices and security.

Simplicity

Switch to a single data and IT centralise files, data and IT management, while solving the communication, collaboration and security needs of all teams.

Lack of visibility

If business leaders can't see when or for how long employees are working, there's a real risk of burn-out. And if IT managers can't see into the entire network, there's a real risk of cyberattack.

Complete transparency

With enterprise-grade security and visibility built-in, Microsoft 365 E5 empowers IT to see, manage and respond to all kinds of threats. And managers can monitor and make sure employees aren't working day and night.

Microsoft 365 is designed for a hybrid future

Improved communication

Business continuity

Anywhere access to files

Centralised collaboration

Predictable spend

Automatic updates

Best-in-class security

Why Insight?

Insight can help you successfully transition to an effective and sustainable hybrid workplace designed to meet your changing business, IT and employee needs without disruption, complexity or risk.

Microsoft Gold Partner with 15+ Gold and Silver competencies
