Power BI Foundations

Insight

Set your foundations for actionable insights and business intelligence, for now and the future

Whether your data is cloud-based or on-premises, straightforward or complex, single-sourced or massively scaled, warehoused or real-time, Power BI is the enabling platform to help you analyse your data and bring your business intelligence efforts to life. For organisations who have decided to leverage the Microsoft Power BI platform to drive analytics outcomes, it is essential to know how to properly secure, govern and scale the platform, to ensure it is ready to meet the needs of your users both now and into the future.

Insight's Power BI Foundations offering provides the core learnings and direction needed to ensure your successful adoption of the platform, including best practice guidance for your Power BI licensing, development, publishing, governance and security procedures that fit your immediate and long term use-cases and operational structures.

Our team of Power BI experts can help you get started on the journey for a fit-for-purpose platform so you can start addressing your priority use-cases with confidence. Take advantage of our extensive real-world experience to tailor a practical approach to deploying and managing Power BI solutions across your business, addressing key architecture, content design and user training challenges.

Insight can help you set your foundations to effectively adopt and maximise value from your Power BI platform.

Insight

Insight's Power BI Foundations

Insight's offering tailors a set of pragmatic, business-oriented procedures by running a series of short, targeted workshops with your key stakeholders to understand your relevant business processes, technical landscape, team structures, approval routes and other business-related functions.

Through the engagement, Insight will produce the following reference documentation to help you get started with your Power BI practice:

Power BI Development Document

- Provides clear guidance to your Power BI content authors regarding the development process including report design principles, development and approval workflows, publishing and sharing functions of the platform.

Power BI Governance Document

- Provides recommendations for the management of Power BI content and general administration of the platform for business use, in line with your organisation's data governance and operational policies.
- It includes a high-level conceptual architecture for connectivity from Power BI to common categories of data sources.

Power BI Licensing Document

- Describes the key features and limitations of each Power BI licensing construct, with Insight's recommendations for each based on identified use-cases applicable to your organisational needs.

Power BI Security Document

- Describes good practices for managing user access to the Power BI platform, workspaces and content, including the provision and de-provision of users and auditing, in line with your security policies.

Key Benefits

- **Best practice guide**
- **Integrated with existing business processes**
- **Clear policies, roles, responsibilities and procedures**

Price

Insight offers the Power BI Foundations engagement at $35,000 AUD (ex. gst), conducted by an Insight Power BI Specialist and supported by an Insight Principal Consultant to ensure peer review and quality assurance across all the deliverables. The written deliverables are intended to provide the practical guidance and direction for your designated team of Power BI developers and administrators.

If your organisation is also interested in upskilling your users, Insight also offers Power BI training, in the form of a two to three days, intensive hands-on classroom course, best for your semi-technical business users to understand and proficiently apply all aspects of the Power BI platform to start building focused, interactive reporting.

Why Insight

At Insight, we define, architect and implement Digital Solutions that help organisations achieve organisational agility, productivity and competitive performance. We offer a broad mix of technology advisory, design and implementation services and have helped a number of Australian organisations pursue data modernisation initiatives to achieve actionable insights and mature their in-house capability for business intelligence with Power BI, Machine Learning and Artificial Intelligence.
